

# THERMOMATIC EC HOME®

## Quickstart Guide for installation and first start-up

NB! When using wireless room sensor, several steps are factory-set. See page 4.

### 1 Fitting the motor to a mixing valve

Fit the motor to the mixing valve according to the instructions on the respective installation kit (example shown in photos 1 and 2). Which installation kit is to be used depends on the mixing valve, see the table and instructions in the installation kit.

Fit the plate (blue/red) for the mixing valve's position indicator on the motor and fix the handle according to photo 3. **NB!** The motor is always delivered in the centre position and the handle only fits in the position that the motor is in. Insert and tighten the screw in the centre of the motor.

Turn the motor to manual position (photo 3). **NB:** The handle must only be turned. If the handle is depressed it may stick in the manual position.

Check that the mixing valve's working area agrees with the position of the handle.

### 2 Installation of the CC

Install the CC with the motor frame bracket as shown in photo 4. **NB!** The bracket can be located on either side of the motor and is pressed into place from behind. The click lock is pressed into the slot until it says "Click" (photo 5). You can use e.g. a small screwdriver to remove the click lock.

The click lock is loose inside the CC on delivery when the CP is not fitted to the CC. If not, it is in the cardboard box.

The CC can also be fitted separately, e.g. on a wall. The box size is adapted for exterior fitting on a 70 mm electrical box (e.g. wall socket).

### 3 Installing the supply sensor

Attach the sensor with the enclosed installation kit on the supply pipe (photo 6) as close to the mixing valve as possible. Ensure that there is good contact. Insulate.

## 4 Cabling

Installing the 4 conductor cable:

Lay the whole cable between the CC and the CP before connecting to the respective units.

## 5 Connection of the CC

Insert the cable through the cable entry. We recommend that you knot the cable as a cable grip (photo 7).

The terminal block can be removed (photo 8) and is pushed into place on the stud after the cables are connected. Connect the 4-way multi-cable to the CC's terminals 1-4. **NB!** The colour combination on the CC terminal block must be repeated when connecting to the CP.

Photo 9 shows the CC's various terminal blocks and their function with numbers and symbols.

Terminals 9-10: Incoming from external control.  
Terminals 11-12: Outgoing Alarm signal.  
**NB! Polarity! Terminal 11 = "+".**

Outdoor sensor (Extra)  
Plinth 7-8

## 6 Connecting the CP

The CP is delivered with the wall fitting/adaptor loose. The CP can later be removed simply with a screwdriver according to photo 11.

Connect the 4-way multi-cable to the CC's terminals 1-4, as shown in photo 12.

**NB!** The same colour combination on the plinths as in the CC.

Do not forget to pull the cable through the wall fitting.

The CP is then pushed in place on the bottom plate with the click lock.

Insert the lower edge first, then press in the upper part.

## 7 Installing the CP or separate room sensor

The CP can be fitted on the CC or on the wall using the enclosed installation kit (plug and screw).

In its standard design, the CP has an integrated temperature sensor that is used as the room sensor. The position of the CP is therefore decisive for correct operation when using the room sensor function.

The CP should be located centrally in the house, in a hall, stairway or similar space which is linked to as much of the rest of the house as possible. Avoid rooms with a lot of supplementary heat sources, such as a kitchen, south-facing living room or upstairs in a two storey house. Position the sensor away from direct sunlight. Avoid placing on an external wall or near an external door. Make sure the sensor is not positioned closer than 1 m from the nearest radiator and around 1.5 m from the floor.

*When using passive room sensor, wireless room sensor, only outdoor sensor or only supply sensor, the position of the CP is unimportant.*

For installation on the CC, see photo 13. The cover screws are then used to fix the CP wall fitting directly to the CC. The multi-cable is always pulled through the wall fitting as shown in photo 14. Photo 15 shows installation with the CP on the CC.

### Using the CP

One press on any of the buttons starts the display. The second press on any button opens the first available menu.

The buttons' function is then displayed above the respective buttons. Button 1 =

Move down/right or reduce value

Button 2 = Move up/left or increase value

Button 3 = Return/escape

Button 4 = OK/activate menu

1 Change

**None of the values can be changed "by mistake".** In all of the modes where it is possible to change a value, you will be prompted whether you are sure you want to make the change before the value is actually changed.

Change wanted?

No OK

### Basic settings on first start-up

At the first start-up, after the first press on OK, you will be guided through the quick start process (see photos below), first System 1 and then System 2 (if System 2 is connected):

*Initiation of wireless room sensor is only shown if the antenna is connected. See separate instruction.*

*When using two systems, a common menu is shown as first picture. See pages 45-46.*

### Other basic settings

**The maximum limit** is set from 0-90 °C. Factory setting is 60 °C.

The setting is made in menu 7.4.

**The minimum limit** is set from 0-60 °C. Factory setting is 10 °C.

The setting is made in menu 7.4.

For more advanced settings, such as setting of night reduction etc. - see the complete manual.

## Quickstart-guide when using wireless room sensor

Other installations and functions are explained in the complete manual for the wireless room sensor

### Locating the antenna:

Antenna should not be placed on metallic objects or on metal pipes.

Antenna should not be located too close to other wireless units or power cables.

Antenna should not be located too close to the room unit during initiation.

### Preparation:

1. Turn off the pump

2. Fit the motor to the mixing valve

3. Fit the flow pipe sensor

4. Plug in the power supply

## 5. Basic settings on first start-up

Menu 7.10 RF Meny is only shown if the antenna is connected

6. Remove the plastic strip on one of the batteries

7. Open the cover and hold the edit button depressed in order to start the initiation

8. INI will light for some seconds – Ready!

9. Start the pump

### Changing temperature setting

Temperature is easily changed by pressing "+" or "-". Save with "OK".
